Preface..

The collection of current agricultural statistics on extent and production of crops, with few exceptions, have been limited to subjective or guess estimates hitherto. The unavailability of information has hindered the decision making process of planners and the securing of a due profit by the producers. The Governments have taken various steps towards the upliftment of farmers economy during the past. In order to make a proper evaluation of the measures that have been undertaken and also to formulate development plans for the future, the establishment of accurate and updated data base is a prerequisite.

In this connection, the Department of Census and Statistics has launched a major statistical program to collect and disseminate statistics pertaining to several aspects of crops. The Survey on Agricultural Crops and Livestock conducted in 1992/93 is one of the major operations carried out in the field of Agricultural statistics.

This study brings together data available from the survey. It is one of a series of special studies undertaken by the Department with the objective of making statistical data available in a more comprehensive way to the reader.

I would like to thank Mr. A.M.U. Dissanayake, Deputy Director in-charge of Agriculture division and Ms. D.D.M.V. Perera, Statistician who volunteered to prepare this report. My acknowledgement is also due to Mr. G.D.A.C. Ratnasekara, Statistical Officer and Statistical Investigators Ms. W.D.M. Srikanthie, Mr. P. Mahadeva, Ms. Padimika Walpita, Mr. T. Warapitiya and all others in the Agriculture Division who provided statistical and secretarial assistance.

A.G.W. Nanayakkara

CARDAMOM

1. Introduction:

Cardamom is one of the important spices used to flavor curries, baked products and in some countries beverages such as tea and coffee. It is also used as a raw material in medicinal products and in cardamom oil for manufacturing of perfumes. Cardamom is commonly known as "Enasal" or 'Karandamungu' by Sri Lankans. It has been cultivated in an area of about 4,600 hectares in the wet and hilly areas of Sri Lanka in the districts of Matale, Kandy, Kegalle, Ratnapura, Nuwara Eliya, Badulla and Gampaha. The major cardamom producing countries in the world are India, Guatemala and Tanzania in addition to Sri Lanka.*1 There are number of varieties of cardamom viz. Malabar, Mysore and Vazukka. The Export Agriculture Department (EAD) of the Ministry of Agriculture and Research reports that the popular variety found in Sri Lanka is similar to "Vazukka". The propagation could be done in one of two ways: using seedlings or suckers.

2. Cardamom Extent:

The total hectareage under Cardamom cultivation was enumerated at 4,625 hectares or 11,427 acres in the survey on Agricultural Crops and livestock 1992/93 which was a parcel-wise enumeration. Cardamom is extensively grown in the mountainous ranges in "Nuckles" in Matale district and "Dumbara Valley" in Kandy district. Although the tenancy was not determined at the survey, it is reliably understood that Cardamom is substantially cultivated in encroachments in those two districts. Out of the total extent of 4,625 hectares, 3,181 hectares or about 69% is in Matale and Kandy districts. Another 25% of the extent is cultivated in Kegalle and Ratnapura districts. The extent in order of the administrative districts is given in table 2.1.

2.1 Extent under cardamom by district

District	Extent Hectares	Percentage	Cumulative percentage
Matale	1685.32	36.44	36.44
Kandy	1495.93	32.35	68.79
Kegalle	650.36	14.06	82.85
Ratnapura	503.13	10.88	93.63
Nuwara Eliya	266.06	5.75	99.48
Badulla	22.52	0.49	99.97
Gampaha	1.28	0.03	100.00
Total	4624.60	100.00	100.00

Cardamom requires a cool climate and an annual rainfall of over 1500 mm. From the spatial distribution of the crop in the country, it could be seen that cardamom is grown in wet and intermediate zones in the hilly areas ranging from 800 meters to 1,800 meters above sea level. Almost 99 percent of the total extent of Cardamom is concentrated in this ecological area. In other words Cardamom

is growing well in the fields that are relatively flatter crests of the mountain ridges and the well drained fertile mountain ridges.

*1 Technical Bulletin No.6, Cardamom Processing and Cultivation 1990, Export Agriculture Department.

2.2 Cardamom Extent Compared to total Extent of cardamom reporting parcels

District	Total extent of parcels	Cardamom extent hectares	% Extent under cardamom
Matale	2713.43	1685.32	62.11
Badulla	64.45	22.52	34.94
Kandy	4369.27	495.93	34.24
Ratnapura	1622.30	503.13	31.01
Kegalle	2393.41	650.36	27.17
Nuwara Eliya	1522.83	266.06	17.47
Gampaha	20.39	1.28	6.27
Total	12706.08	4624.60	36.40

This indicates that the ratio of land devoted to Cardamom in the Cardamom reporting lands is more prominent in Matale district., which is a indication of extensive farming of Cardamom crop.. In this context Kandy, Badulla and Ratnapura are also vital where the ratio above 30 percent.

2.3 No. of Divisions/villages reporting cardamom

District	D.S Divisions	G.N Divisions	Villages
Badulla	5	9	14
Gampaha	2	2	3
Kandy	7	31	58
Kegalle	2	9	18
Matale	5	11	28
Nuwara Eliya	3	22	60
Ratnapura	5	10	12
Total	29	94	193

3. Number of Parcels

The total number of Cardamom reporting parcels (lands) in the Island is enumerated to be little over 1500, out of which 567 are reported in Kandy district. However, in the district of Matale where the largest extent is reported under Cardamom there are only 186 parcels. This indicates that the Cardamom cultivation is carried out in large farms in "Nuckles mountain range" in Matale district. In terms of number of farms, small holdings are more prominent in Nuwara Eliya, Kandy, Kegalle, Ratnapura, Badulla and Gampaha districts.

3.1 Number of cardamom parcels by district

District	No. of Parcels	percentage	Cumulative percentage
Kandy	567	36.72	36.72
Nuwara Eliya	511	33.10	69.82
Matale	186	12.05	81.87
Badulla	120	7.77	89.64
Kegalle	72	4.66	94.3
Gampaha	62	4.02	98.32
Ratnapura	26	1.68	100.00
Total	1544	100.00	

4. Size Distribution of Cardamom Parcels & Extent

The size classes of the Cardamom reporting lands (parcels) were determined according to the individual Cardamom extent of such parcels but not according to the basis of the total extent reported in those parcels. It has been revealed that about 82.7 percent of the parcels are in the category of less than 2 hectares, but they accounted for only 7.8 percent of total Cardamom area. Another 8.7 percent of the parcels are between 2 - 5 ha. in extent and account for 8.2 percent of the total Cardamom area in the island.

4.1 Number and extent under cardamom reporting parcels classified by size class and district.

District	Less than 2 hect.		2 - 5 hect.		More than 5 hect.							
	No:	%	Area	%	No:	%	Area	%	No:	%	Area	%
Badulla	120	100.0	22.5	100.0	-	0.0	-	0.0	-	0.0	-	0.0
Gampaha	62	100.0	1.3	100.0	-	0.0	-	0.0	0.0	0.0	-	0.0
Kandy	434	76.5	220.1	44.7	68	12.0	208.3	33.9	65	11.5	1067.5	71.4
Kegalle	58	80.6	25.1	3.9	4	5.6	10.9	1.7	10	13.9	614.3	94.5
Matale	89	47.8	21.5	1.3	55	29.6	142.0	8.3	42	22.6	1521.8	90.3
N. Eliya	498	97.5	64.2	24.1	5	1.0	10.5	3.9	8	1.6	191.4	71.9
Ratnapura	16	61.5	5.5	1.1	2	7.7	7.3	1.1	8	30.8	490.3	97.5
Total	1277	82.7	360.3	7.8	134	8.7	379.1	8.2	133	8.6	3835.3	84.0

However, 8.6 percent of the number of parcels cover over 80 percent of the Cardamom area. This indicates, that the Cardamom crop is in the hand of large holders and the average size of the Cardamom area of this category could be estimated at 29 hectares. So, the Cardamom cultivation does not play a vital role as a source of income to the small farmers who are operating lands below 2 hectares.

5. Growing Pattern.

Out of 1544 Cardamom parcels, 431 parcels or 28 percent are reported under home gardens. Cardamom requires shade crops. As such, it is grown either mixed with the agricultural crops or other plants such as Albizia or under forest Canopy.

5.1 Growing pattern

Pattern	No of Parcels	Percentage
Pure Strand *	509	33.0
Mixed with other crops	808	52.3
Reporting only with Tea	158	10.2
Reporting Tea & other crops	42	2.7
Reporting only Coconut	27	1.8
Total	1544	100.0

* Pure Strand denotes that the parcels reporting Cardamom crop without any agricultural crops, but it could be cultivated with shade providing plants or under forest canopy.

The above Table shows that about 67% of the Cardamom reporting parcels have been reported under mixed cultivation. Any other agricultural crop has not been reported in the rest of the lands, which means shade providing plants are being cultivated in those lands. A substantial area of Cardamom cultivation is reported in the tea lands in Nuwara Eliya and Kandy districts.

6. Production & Exports

The production estimates available at present are limited to subjective estimates. The Department of Census and Statistics maintains a production series computed as the product of the potential yields of the crop under prevailing climatic conditions and the proportion of the bearing extent, in consultation with the Agricultural Extension officers in respective districts.

6.1 Extent of Cardamom - 1993

Type	Extent hectares	percentage
Bearing	3978	86.0
Non bearing	647	14.00
Total	4625	100.00

EAD reports that the yields vary greatly with age of plantation and soil management conditions. The potential annual average yield of dried Cardamom would be around 60 kg/ha. However, estates under good management have been observed to yield about 250 kg/ha. of dried Cardamom when in full production.

Assuming 86% of the extent is in bearing stage and potential annual average yield is about 250 kgs/hectare, the maximum potential production would be around 1000 metric tons and the minimum would be about 250 metric tons for the year 1993.

6.2 Percentage distribution of Cardamom Extent according to bearing & non bearing - 1993

District	Bearing percentage	Non bearing percentage
Badulla	37	63
Gampaha	84	16
Kandy	85	15
Matale	84	16
Nuwara Eliya	97	03
Ratnapura	76	24
Kegalle	94	06
All District	86	14

The Cardamom extent classified according to bearing and non bearing by district is shown in Table 6.2.

According to the custom returns the export volume of Cardamom for years 1992 and 1993 are 21 mts (20,571 kgs.) and 14 mts (14,289 kgs.) respectively. Assuming a minimum production level of 250 metric tons, only 6 percent of the local production caters to world market and 94% is consumed locally. This is an area one that merits as study: is the production locally consumed? or a substantial portion of production is illegally exported to the world market or smuggled to neighboring countries.

7. Source of Information

Generally the information pertaining to crop extent is collected through the Census of Agriculture conducted decennially. The last Census of Agriculture was conducted in 1982 and the next was scheduled for 1992. Due to the disturbed conditions prevailing in some parts in the country, it was not feasible to take the census in 1992. Absence of the census has adversely affected the field of agriculture information system. However, the Department felt the increasing need for this information and made arrangements to conduct a "mini census" which was known as "The survey on Agricultural Crops and Livestock 1992/93". This survey collected parcel-wise information on a limited number of topics.

8. Relevant Concepts and Definitions

(a) **Parcel:** is defined to be a piece of land cultivated either singly or jointly and is separated by a similar land cultivated by other cultivators or a water way, public road, boundary, fence or other such limits. This could be a land cultivated at the time of data collection or prepared for cultivation during the season, irrespective of legal ownership.

(b) Home Garden:

(a) A parcel of which land extent is less than or equal to 20 perches having some form of cultivation/livestock and with a dwelling house was defined to be a home garden.

(b) A parcel of land which has some form of cultivation/livestock the total area of which is more than twenty perches could also be a home garden if the following two conditions are fulfilled.

(i) It has a dwelling house.

(ii) The produce of the parcel is mainly used for home consumption.

(c) **Extent Under Crops:** In most parcels in Sri Lanka, the general pattern is mixed cropping. Even in large plantations there are instances where mixed cropping has been under taken. Thus, estimating the acreage under various crops poses serious problems to the enumerator. This is especially so when numerous varieties are haphazardly grown in a parcel. The problem is further aggravated as the density of the mixed cropping vary from parcel to parcel. In keeping these features in mind the following methods of estimation procedures have been used to give the extent in the case of mixed cropping.

- (a) Method of total area allocated to principal crops.
- (b) Equal fraction for each mixed crop.
- (c) Estimating the area based on number of plants.

Sometimes the enumerators were not able to provide the extent under each crop separately, when a number of crops are being cultivated in one parcel. In such instances they were instructed to count the number of trees, creepers or bushes grown in the parcel and the extent under each crop was estimated with the help of a table which provide the density of plants recommended per acre/hectare. For the crops not included the Table, estimates were made based on the general knowledge of farmers in respect of their division.

Source of information

Generally the information pertaining to crop extent is collected through the census of agriculture conducted periodically. The last Census of Agriculture was conducted in 1982 and the next was scheduled for 1992. Due to the disturbed conditions prevailing in some parts in the country it was not feasible to take the census in 1992. Absence of the census has adversely affected the field of agriculture information system. However, the Department felt the increasing need for the information and made arrangements to conduct a "mini census" which was known as "The survey on Agricultural Crops and Livestock 1992/93". This survey collected parcel-wise information on a limited number of topics.

8. Relevant Concepts and Definitions

(a) Parcel is defined to be a piece of land cultivated either singly or jointly and is separated by a natural boundary or other cultivated or other cultivated by a water way, public road, boundary, fence or other such limits. This could be a hand cultivated or prepared for cultivation during the season irrespective of legal ownership.

(b) Home Garden

(a) A parcel of which land extent is less than or equal to 20 perches having some form of cultivation, stock and with dwelling houses will be defined to be a home garden.

(b) A parcel of land which has some form of cultivation/livestock (the total area of which is more than twenty perches could also be a home garden if the following two conditions are fulfilled:

- (i) It has a dwelling house.
- (ii) The produce of the parcel is mainly used for home consumption.
