Census of Livestock – Western province 2000

1. Introduction

Census of Livestock, Western Province 2000 was undertaken by the Department of Census & Statistics (DCS) in collaboration with the Ministry of Livestock and Estate Infrastructure, and the Ministry of Agriculture, Lands, Minor Irrigation, Animal Production & Health and Council Affairs of the Western Province. This is an important operation undertaken as on a pilot basis where predominantly basic information on the livestock farms that were collected.

The required funds were allocated from the Ministry of Livestock and Estate Infrastructure, while the Ministry of Agriculture, Lands, Minor Irrigation, Animal Production & Health and Council Affairs of the Western Province was responsible for logistical operations of the Census. The technical guidance, field supervision data processing, drafting and printing of questionnaires and instructions were the contributions of the DCS. Further the field staff of the Department of Agrarian Services under the directions of Assistant Commissioners and Divisional Officers, Govi Sevana Animators (Agricultural Research and Production Assistants) were responsible for data collection or enumeration work in their jurisdictions. Veterinary Surgeons of the Animal Production and Health Department of the Western Province assisted in numerous ways as to conclude the Census to a success.

The existing methodology of collecting the livestock data under the current statistical program, i.e. the annual estimates supplied by Grama Niladhari through the prescribed form of animal husbandry and poultry statistics (Form L1) experienced problems in providing a better estimation on the livestock sector of the economy as they are limited to guess estimates. Further, the National Census of Agriculture and Livestock is the primary source of supplying benchmark data relating to livestock for a specific year are with having a limited scope. However, the Census of Agriculture due in 1992 was not carried out due to the disturbed conditions in certain parts of the Island.

Considering the above situation, the DCS is in a process of making up a plan to conduct the Census of Agriculture and Livestock in the year 2002. Thereby it was arranged to conduct a pilot study with a view to decide the contents of the livestock sector in the Census questionnaire and had discussed among users in the Livestock sector mainly, with the Ministry of Livestock and Estate Infrastructure. In the meantime the Ministry of Agriculture, Lands, Minor Irrigation, Animal Production & Health and Council Affairs of the Western Province had shown their keen interest to obtain data for livestock in the province as to formulate their development programs. That is how this program was initiated to satisfy both needs.

2. Coverage

Basically the Agricultural Research and Production Assistants covered all the livestock operators/holdings of the private and public sector in the Western Province in this Census by visiting the housing units/institutions. The exception is that in the highly urbanized areas such as Municipality limits of Colombo, Dehiwala, and Sri Jayawardanepura Kotte were enumerated with the assistance of designated officers of Veterinary Surgeons of the Animal Production and Health of the Western Province by visiting only the households or farms that were identified on the basis of prior information.

A total of 2,525 GN Divisions 544 in Colombo, 1,138 in Gampaha and 843 in Kalutara were covered. However, a number of GN divisions where this Census was not covered as they are identified as either unavailable or insignificant in livestock farming. That list is given in the Annex I. The information relating to breeding farms were not taken by the census since these farms are restricted areas for unauthorized persons under provisions of the act of quarantines.

The enumerators have visited each and every housing unit/ institution in their jurisdiction and screen out whether there is any livestock species being kept using the Listing form called LS I Annex II. When they found any livestock, the specified information was recorded in the form called LS 2.

The main questionnaire (LS.2) consisted of eight sections as follows.

1. Identification details
2. Cattle
3. Buffalo
4. Goat
5. Artificial breeding
6. Swine
7. Poultry
8. Land area under the Farm

The reference period for data was considered as the day prior to the visit if not elsewhere specified in the questionnaire.

3. Concepts and Definitions

Basically the livestock numbers recorded are based on open segment approach i.e as information reported on the basis of operator's residence irrespective of the location of the livestock farm.

Livestock Operator

For the purpose of this Census the Livestock, the operator is defined as the person who is responsible to take day-to-day decisions on the livestock farm.
